

/Project/GOF Project

Software System Development Rollup Plan Summary

Earned Value

Earned Value - GOF Project

Planned value is being calculated correctly. In the schedule on page 2, we can see that the planned value of the project is 100%. However, the EV analysis produced by the tool does not show the correct planned value from 22-Apr onwards. Initially, it was calculating it properly. We tried to solve this problem, however, we could not find any anomaly in the data which could have caused this.

Planned v/s actual direct hours. We (team) never put more than available hours for any of the weeks.

CPI was good, probably because we reused a library that compares two text file.

Replanned Completion Date:	May 2, 2009	(If you were to "replan from today," taking into account the amount of time your actual progress has slipped against your original plan, but assuming that your original planned times still hold true for all remaining tasks and time periods, the replanned completion date for the overall work would be May 2, 2009.)
Cost Variance:	92.107	(The tasks completed to date have taken 92.1 hours less effort than planned.)
Cost Variance %:	35%	(The tasks completed to date have taken 35% less effort than planned.)
Cost Performance Index:	1.54	(Work is taking less time than planned. For every effort hour actually spent, you are accomplishing 1.54 hours worth of planned results. This usually means that your original effort estimate was too big.)
Schedule Variance:	120.935	(You have completed 121 hours more work than you had planned to complete by this date.)
Schedule Variance %:	85%	(You have completed 85% more work than you had planned to complete by this date.)
Schedule Variance Duration:	16.034	(Based upon your current rate of task completion to date, you are 2.29 weeks ahead of schedule.)
Schedule Performance Index:	1.853	(You are completing tasks more quickly than scheduled. For every effort hour of work you should have accomplished to date, you are completing 1.853 hours. This may mean that your original planned schedule was too laid-back.)
Percent Complete:	100%	(You have completed 100% of the total work.)
Percent Spent:	65%	(The tasks completed to date have used 65% of the total planned effort hours.)
To Complete Performance Index:	0	(In order to complete all the work within the original effort estimate, each future hour of effort must accomplish 0 hours worth of planned results.)
Improvement Ratio:	-1	(In order to complete all the work within the original effort estimate, you can be 100% less productive in the future than you have been in the past.)
Forecast Cost:	170.65	(Based upon your current CPI, the total work is forecast to require 171 hours of effort.)
Forecast Cost Range:	170.65 - 170.65	(Based upon the tasks you have completed to date, the total work is likely to require between 171 hours and 171 hours of effort. (This range estimates 70% probability.))

We have been close to 1 and 1.85 is not correct.

We completed all the tasks we had on the WBS.

Forecast Duration:

34.836

(If subschedules are not rebalanced, and each continues at its current rate of task completion to date, the total work schedule is forecast to be 1.16 months.)

Forecast Completion Date:

May 2, 2009

(If subschedules are not rebalanced, and each continues at its current rate of task completion to date, the total work is forecast to be completed May 2, 2009.)

Forecast Completion Range:

5/2/09 - 5/2/09

(Based upon the work you have completed to date, the total work is likely to be completed between May 2, 2009 and May 2, 2009. (This range estimates 70% probability.))

Optimized Forecast Duration:

33.182

(If you rebalanced subschedules optimally (so they all complete at the same time), the total work schedule is forecast to be 1.11 months (based upon your current rate of task completion to date).)

Optimized Forecast Completion Date:

May 1, 2009

(If you rebalanced subschedules optimally (so they all complete at the same time), the total work is forecast to be completed May 1, 2009 (based upon your current rate of task completion to date).)

Earned Value

task

Completed

Planned value for the entire schedule is 100%
