## Software System Development Rollup Plan Summary

### Earned Value

### Earned Value - GOF Project

Optimized Plan Date:	Jun 15, 2009	(If you rebalanced subschedules optimally (so they all plan to complete at the same time), the overall planned completion date would be Jun 15, 2009.)
Cost Variance:	29.567	(The tasks completed to date have taken 29.6 hours less effort than planned.)
Cost Variance %:	24%	(The tasks completed to date have taken 24% less effort than planned.)
Cost Performance Index:	1.315	(Work is taking less time than planned. For every effort hour actually spent, you are accomplishing 1.315 hours worth of planned results. This usually means that your original effort estimate was too big.)
Schedule Variance:	9.631	(You have completed 9.63 hours more work than you had planned to complete by this date.)
Schedule Variance %:	8%	(You have completed 8% more work than you had planned to complete by this date.)
Schedule Variance Duration:	1.946	(Based upon your current rate of task completion to date, you are 1.95 days ahead of schedule.)
Schedule Performance Index:	1.085	(You are completing tasks more quickly than scheduled. For every effort hour of work you should have accomplished to date, you are completing 1.085 hours. This may mean that your original planned schedule was too laid-back.)
Percent Complete:	41%	(You have completed 41% of the total work.)
Percent Spent:	31%	(The tasks completed to date have used 31% of the total planned effort hours.)
To Complete Performance Index:	0.86	(In order to complete all the work within the original effort estimate, each future hour of effort must accomplish 0.86 hours worth of planned results.)
Improvement Ratio:	-0.347	(In order to complete all the work within the original effort estimate, you can be 35% less productive in the future than you have been in the past.)
Forecast Cost:	261.096	(Based upon your current CPI, the total work is forecast to require 261 hours of effort.)
Forecast Cost Range:	233.217 - 284.192	(Based upon the tasks you have completed to date, the total work is likely to require between 233 hours and 284 hours of effort. (This range estimates 70% probability.))
Optimized Forecast Duration:	83.618	(If you rebalanced subschedules optimally (so they all complete at the same time), the total work schedule is forecast to be 2.79 months (based upon your current rate of task completion to date).)

Optimized Forecast Completion Date:

Jun 20, 2009

(If you rebalanced subschedules optimally (so they all complete at the same time), the total work is forecast to be completed Jun 20, 2009 (based upon your current rate of task completion to date).)
